

```
def hello_world():
    print("Hello floating world!")
```

Listing 1: Floating Listing.

This is Python code:

```
1 import numpy as np
2
3 def incmatrix(genl1,genl2):
4     m = len(genl1)
5     n = len(genl2)
6     M = None #to become the incidence matrix
7     VT = np.zeros((n*m,1), int) #dummy variable
8     print("I am here")
9
10    #compute the bitwise xor matrix
11    M1 = bitxormatrix(genl1)
12    M2 = np.triu(bitxormatrix(genl2),1)
13
14    for i in range(m-1):
15        for j in range(i+1, m):
16            [r,c] = np.where(M2 == M1[i,j])
17            for k in range(len(r)):
18                VT[(i)*n + r[k]] = 1;
19                VT[(i)*n + c[k]] = 1;
20                VT[(j)*n + r[k]] = 1;
21                VT[(j)*n + c[k]] = 1;
22
23            if M is None:
24                M = np.copy(VT)
25            else:
26                M = np.concatenate((M, VT), 1)
27
28            VT = np.zeros((n*m,1), int)
29
30    return M
```

Here is an example with listing:
